

I CLAIM:

1. A fixture for securing an umbrella to a chair comprising a first clip, a second clip, a connector nod, a pulling rod, a cam rod, a pin and a spring, both said first clip and said second clip having an arcuate recess at one side corresponding to each other, said  
5 pin being inserted through said spring and connected with said first clip and said second clip at respective ends thereof, said first clip having a hole at a center, said connector nod comprising a spherical socket at one end and a connecting end at another end thereof, said spherical socket having an opening at an outer end, a notch at one side and a ditch at an opposite side, said notch being interconnected with said  
10 opening, said ditch extending to said connecting end and forcing said connecting end into said hole of said first clip, said pulling rod being inserted through said first clip and said second clip and connected with said cam rod at one end, by pulling or pushing said cam rod to close or release said first clip and said second clip.
2. The fixture for securing an umbrella to a chair, as recited in claim 1, wherein said  
15 connecting end of said connector nod is in a cone shape.
